

## **1. PACKED CASINGS**

---

Our packed casings are being used on export destinations all over the world, on all types of farms; caves and above ground farms both with bags, blocks, trays or shelves.

Below a description of the most used types and packaging, other packaging and/or qualities are available on demand.

### **□ CASINGS IN 50 LT. BAGS**

We pack 3 different qualities in strong plastic bags. We developed the types so that we can load the optimal weight without very large quality compromises.

The bags can be loaded loose or on pallets for transport either by truck or by sea container.

### **Casing EXPORT**

Quality peat's mixed with sugarbeetlime make a casing with a moisture content of about 60 % which can be handled easily, however this casing needs more on-farm preparation before use.

### **Casing HORST**

In this casing stone grindings are being used to adjust the pH. The casing has a moisture content of about 65 %. Because of the use of stone grindings it has a more open structure, but still has good water management properties all through the flushes.

### **Casing EUROPE**

A coarse, wet casing with sugarbeetlime. It has a moisture content of about 65 %. The casing can be moistened up easily and will maintain its structure, softness and moisture easier in the later flushes.

### **□ CASINGS IN BIG BAGS**

We produce for big bag clients 2 types of casing. Because of transportation weight limits the mixtures vary to get the best volume container. We deliver our casing in strong, 95 % watertight one-way big bags, which are fully closed at the top, to guarantee quality and hygiene. The big bags can be loaded with or without pallets in different types of containers.

### **Casing HORST**

In this casing (also produced in 50 lt. bags) stone grindings are being used to adjust the pH. The casing has a moisture content of about 65 %. Because of the use of stone grindings it has a more open structure, but still has good water management properties all through the flushes.

### **Casing EUROPE**

A coarse, wet casing with sugarbeetlime (also produced in 50 lt. bags). It has a moisture content of about 65 %. The casing can be moistened up easily and will maintain its structure, softness and moisture easy in the later flushes.

**Depending on mode of transport and transit time we can also load more heavy / wet casing types in BIG BAGS.**

## **2. BULK CASINGS**

---

For customers which have very hygienic storage and want a more heavy casing we can load the casing EUROPE and HORST also in bulk in 20 ft. containers.

Important to keep in mind is that they have to be unloaded with a container tipping truck.
